In the Claims:

The following listings of the claims will replace all prior versions and listings of the claims in this application:

Claim 14 (Currently amended): A process for making a color and odor stable polycarboxylic acid or a polyhydroxy acid comprising:

(a) providing an organism for producing a polycarboxylic acid or a polyhydroxy acid;

(b) providing a substrate for conversion to a polycarboxylic acid or a polyhydroxy acid

by the organism;

(c) providing a fermentation medium consisting of:

(i) a source of metabolizable carbon and energy;

(ii) a source of inorganic nitrogen selected from the group consisting of ammonia, ammonium hydroxide, ammonium sulphate, and mixtures thereof;

(iii) potassium phosphate;

(iv) at least one metal selected from the group consisting of an alkali metal, an alkaline earth metal, a transition metal, and mixtures thereof;

(v) a source of biotin, substantially free of particulate matter and bacteria;

(vi) at least one chelating agent; and

(vii) an antifoam agent; and

(d) fermenting a mixture comprising said organism, substrate and fermentation medium of (a), (b) and (c) at a pH of 5.4 to 7.

Claim 18 (Currently amended): The process of claim 14, wherein [[,]] the source of inorganic nitrogen is ammonium sulfate.

Claim 19 (canceled)

Claim 20 (Currently amended): The process of claim 14, wherein [[,]] the metal is calcium.

Claim 21 (Currently amended): The process of claim 14, wherein [[,]] metal is magnesium.

Claim 22 (Currently amended): The process of claim 14, wherein [[,]] the metal is calcium and magnesium.

Claims 23-24 (canceled)

Claim 25 (Currently amended): The process of claim 14, which further comprises adding at least one trace metal during the fermentation.

Claim 28 (Currently amended): The process of claim 14, wherein [[,]] the source of inorganic nitrogen is a member selected from the group consisting of ammonia, ammonium hydroxide, and mixtures thereof.

Examiner's Reasons For Allowance

8. The following is an examiner's statement of reasons for allowance:

The closest art is:

- U.S. Patent 5,618, 708 issued 8 April 1997 to Shirai et al. Shirai et al. teach a process to make inositol through fermenting *Candida* in a medium where source of biotin is yeast extract or biotin.
- U.S. Patent 6,066,480 issued 23 May 2000 to Mobley et al. Mobley et al. teach a process to make diacids from fatty acids and fatty acid esters via *Candida* fermentation.

Thus, none of the cited art and other referenced prior art, either alone or in combination suggests a fermentation method employing *Candida tropicalis* strains ATCC 20962 and 20913 in a culture medium comprising substantially pure biotin to produce a color and odor-stable polycarboxylic acid or a polyhydroxy acid, wherein source of carbon and energy is glucose. Furthermore, applicants' unexpected discovery that utilizing a relatively pure biotin source, the odor and separation difficulties in downstream processing for product recovery are substantially reduced.

9. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

10. Claims 14-18, 20-22, 25 and 27-28 are allowed.
